

Architecture Design around your business needs

SUMMARY

- Reduce risk and complexity
- Increase stability and security
- Improve performance
- Align to Microsoft best practise, where possible
- Consolidate and collapse forests and domains

FEATURES

- Security is integrated through logon, and access is controlled using a single logon for File Shares, Printers and Applications anywhere in the network
- A global catalogue of services and objects provides a view of your entire environment
- Policy-based segmentation of assets for central and de-centralised access and control

THE VIADEX ACTIVE DIRECTORY ASSESSMENT SERVICE IS IDEAL FOR:

- Organisations preparing to move to Public Cloud services, seeking to ensure their infrastructure is ready
- Organisations with growing risk and compliance requirements
- Organisations with domains which have been upgraded in-place from previous versions
- Organisations that need a secure infrastructure due to rapid growth or multiple locations with decentralised IT command and control

Active Directory health and stability is fundamental to any business operating Microsoft's technology stack, providing authentication and authorisation for users accessing company assets (files, business applications, services, network devices and printers), both on-premise and in the Cloud.

Forests and domains evolve organically and are upgraded live and in-place with new features often delivered in a disabled state, to ensure stability.

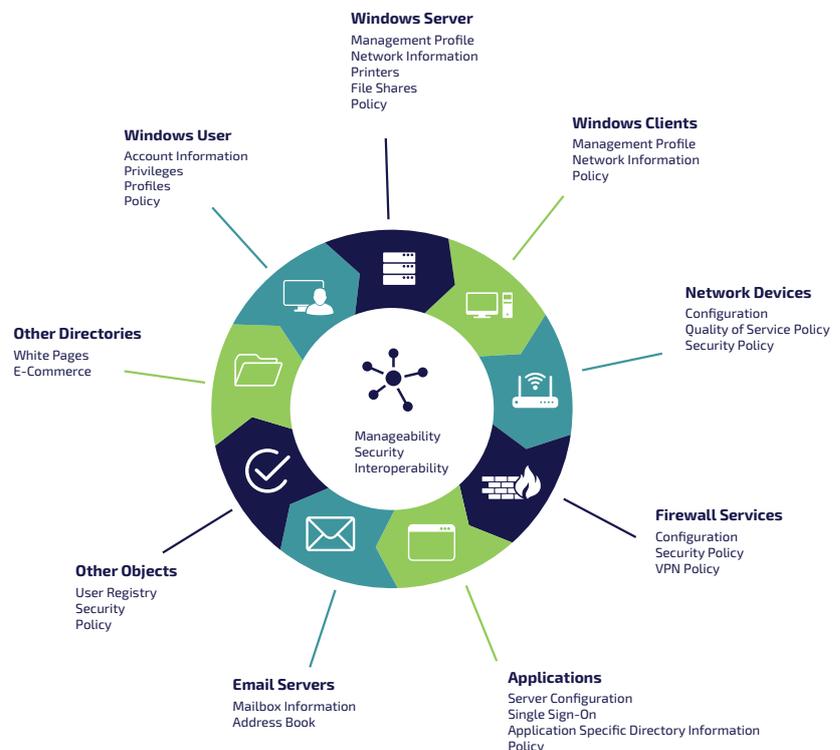

It's important to circle back from time to time to ensure Active Directory is in the best state possible to support the business, this is particularly important when operating in or considering a move to public clouds as the security perimeter extends well beyond traditional confines.

THE SOLUTION

Viadex employ a methodology which has been developed in-house covering three aspects namely, design, technical and operational, with more than 40 distinct areas of evaluation.

The service is delivered by interrogating systems programmatically and through consultation with the customer's architectural and operational structures to ensure significant and relevant value is delivered.

The output is a report detailing each check, why it is relevant, what the specific findings were and the associated risks, with an engineering estimate for remediation. The customer can then either task their teams with completing remedial actions or engage Viadex for the same. If required an updated report can be issued after remedial actions have been completed.

Active Directory Health Check

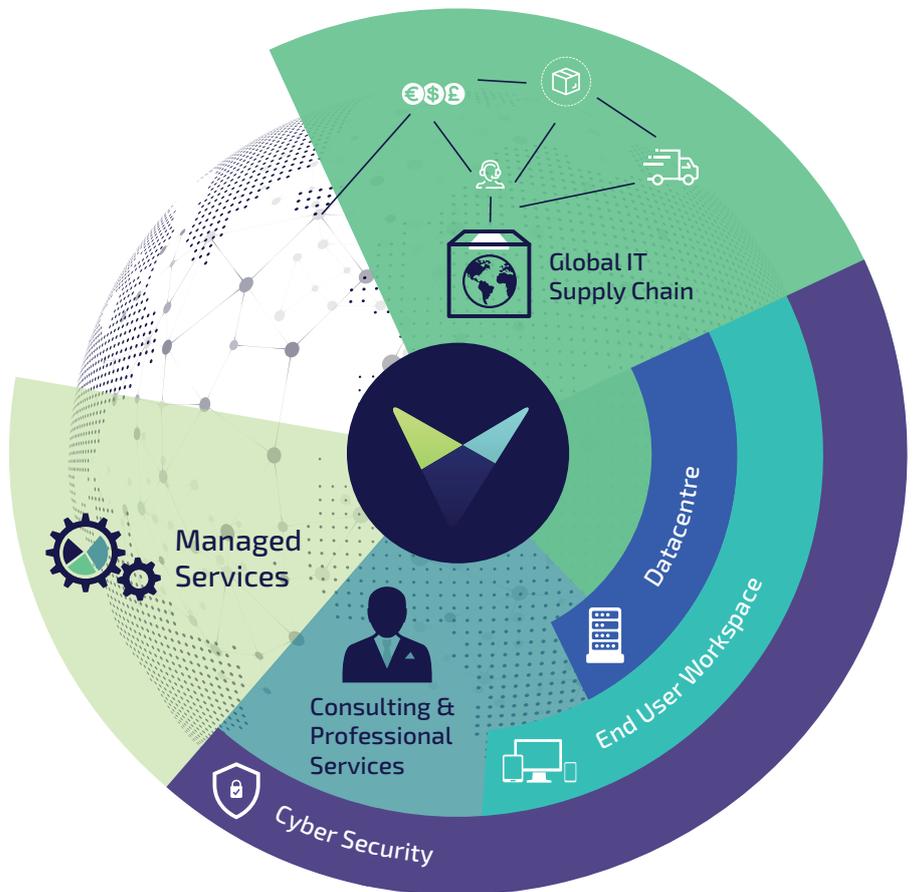

About Viadex

Experience: Viadex work with best-in-class global partners to deliver tried and tested approaches and engagement models, following a robust framework approach to ensure justifiable outcomes and reduce project risks.

Direction: In an increasingly competitive environment, a 'one size fits all' approach to IT rarely addresses your objectives: reducing risk, reducing costs or improving efficiencies.

Precision: Our structured methodology analyses your current mode of operation (CMO) to best define the scope of the IT solution, aligned to the needs of the business now and into the future.

Focus: Viadex provide tactical and strategic IT direction to help focus on your current and future business goals and long-term strategy.

Global Logistics

By partnering with our customers, we handle the process of manufacturer evaluation and selection, commercial negotiations and global support to make sure the technology solutions meet the necessary business requirements.

The Viadex Global Logistics Service helps you create an infrastructure that is agile enough to adapt and grow with you across the globe. The entire team work across all International time zones, no matter where you are based, offering a 24/7 emergency worldwide response.

Consulting and Professional Services

An agile infrastructure designed to service end-user experience is both critical and indispensable in today's world.

Viadex Consulting and Professional Services follow our core methodology of Audit, Design, Deploy and Optimise, to help transform your infrastructure to directly support your business productivity goals and enhance end-user experience.

Managed Services

Viadex has the global capability to provide a wide range of Managed Service solutions to help organisations with the operation of their technology environments.

Viadex provide 24x7x365 technical expertise, service consistency and flexibility across multiple vendors, technologies and geographies.

Every service is wrapped into our Global IT Service Desk, using IT Service Management and ITIL aligned frameworks, detailing set processes supported by highly skilled and trained people.
