

## Your cyber security posture is now more important than ever before.

### FEATURES

Vulnerability scans and penetration tests are useful for getting a snapshot insight into the security posture of an organisation at any given moment. Although useful, they do not present the full picture; especially when it comes to more sophisticated, multi-vector attacks. This is where real-time breach and attack simulations significantly improve visibility of multi-vector attacks.

### THE CYBER ASSESSMENT IS IDEAL FOR COMPANIES WHO:

- Have existing cyber security insurance at a standard premium or are looking to invest in cyber insurance in future.
- Want to understand their cyber security posture across the 8 key vectors.
- Are not currently running real-time vulnerability scans for thousands of different security vulnerabilities in networks or host systems.
- Want to simulate and test attack vectors by impersonating hackers, cyber criminals nations powers and even rogue insiders before an actual attack will take place; exploiting any weaknesses.

## Does your business have the right insurance to protect against multi-vector cyber crimes?

### Some businesses never recover from a cyber crime.

Expenses arising from a cyber security incident often extend far beyond direct financial loss. Understanding what damages can and cannot be insured against helps business leaders select the right policies and extensions to protect their business.

**The more a company does to become proactive against cyber risk, the more competitive the insurance quote.**

### THE SOLUTION

Organisations of all shapes and sizes are fighting the war against cyber attackers. Cyber insurance is rapidly becoming a standard requirement and finding a realistic premium with sufficient cover is expensive and standardised for most of the organisations that we have helped. As seen in recent years, cyber attacks are becoming more sophisticated, which makes it harder to detect and mitigate them. Cyber insurance is now widely adopted however; the underwriters are providing premiums based on insufficient data.

*A real-time view on the posture of your organisation's security can significantly improve cyber insurance premiums and the overall understanding of the risks associated.*

Viadex operates globally as a trusted supply chain partner to many globally dispersed businesses. Current methods that we see organisations (and their CISOs) mainly use to verify that their systems and data are protected, are vulnerability scans and penetration tests. The results are used for risk assessments that has become an integral part of mandatory provisions in various regulations. (e.g. GDPR).

### THE BENEFITS

The optimal way for an organisation to test its resilience against the growing cyber crime wave is to opt for targeted attack simulations that use multi-vector simulated attacks. These kind of simulations are also known as Breach & Attack Simulations (BAS).

*With Viadex's global cyber security capabilities, organisations can continuously test against cyber crime campaigns and directed APTs (advanced persistent threat) to mitigate cyber attacks globally.*

## Cyber Security Assessment & Cyber Insurance

## About Viadex

**Tailored:** We tailor our Managed Services to meet your needs and business demands. Services range from monitoring events in your datacentre to managing your hybrid environment, out to your end users' desktops and applications.

**Protection:** Viadex Managed Services provide continuous vigilance over what happens in your datacentre, your systems, your cloud environment, network, applications and endpoints.

**Support:** Viadex provides 24x7x365 technical expertise, service consistency and flexibility across multiple vendors, technologies and geographies.

**Focus:** Viadex help you to reduce overheads and improve efficiency by leveraging our scale, methodologies and high levels of standardisation to deliver world-class solutions enabling your business to concentrate on what it does best.

### Global Logistics

By partnering with our customers, we handle the process of manufacturer evaluation and selection, commercial negotiations and global support to make sure the technology solutions meet the necessary business requirements.

The Viadex Global Logistics Service helps you create an infrastructure that is agile enough to adapt and grow with you across the globe. The entire team work across all International time zones, no matter where you are based, offering a 24/7 emergency worldwide response.

### Consulting and Professional Services

An agile infrastructure designed to service end-user experience is both critical and indispensable in today's world.

Viadex Consulting and Professional Services follow our core methodology of Audit, Design, Deploy and Optimise, to help transform your infrastructure to directly support your business productivity goals and enhance end-user experience.

### Managed Services

Viadex has the global capability to provide a wide range of Managed Service solutions to help organisations with the operation of their technology environments.

Viadex provide 24x7x365 technical expertise, service consistency and flexibility across multiple vendors, technologies and geographies.

Every service is wrapped into our Global IT Service Desk, using IT Service Management and ITIL aligned frameworks, detailing set processes supported by highly skilled and trained people.
